```

The whole course — check every box you've earned (hint: all of them)

- [ ] I can make a computer **print** anything — and read its error messages like clues *(week 1)*
- [ ] I can store values in **variables** and do math faster than any calculator race *(week 2)*
- [ ] I can **ask the user questions** and build sentences with f-strings *(week 3)*
- [ ] I can make a program **decide** with if/elif/else *(week 4)*
- [ ] I can roll dice and flip coins with **random** *(week 5)*
- [ ] I can make a computer do something 1,000 times with a **for loop** *(week 6)*
- [ ] I can keep a game alive with a **while loop** *(week 7)*
- [ ] I can take **strings apart** — indexing, slicing, letters as numbers *(week 8)*
- [ ] I can **encrypt a secret message** (and crack one) *(week 9)*
- [ ] I can invent my own commands with **functions** *(week 10)*
- [ ] I can **draw geometry with code** — polygons, spirals, art *(weeks 11–12)*
- [ ] I can **simulate** thousands of experiments — and measure π with rain *(weeks 13–14)*
- [ ] I helped **design and ship a real game** *(weeks 15–16)*

🚀 Where to go next — all free

Resource	What it is
python.org/about/gettingstarted	the official "install Python at home" starting line
code.org & **Hour of Code**	free guided projects, from beginner to wild
Scratch (scratch.mit.edu)	drag-and-drop coding — and a great bridge *back* to Python: rebuild a Scratch project in Python
Replit or **Trinket**	Python **in the browser** — no install, runs on almost anything; type in your class game!
CodeCombat	learn more Python by playing a dungeon game (you now know how it was built)
Automate the Boring Stuff with Python	a famous free-to-read book — great for older teens; the first chapters will feel like review

> *Ask your teacher for the class game's file — everything in it, you learned.*

🧠 The final brain teaser (take it home — you've earned it)

Week 1, you programmed a human to make a sandwich. Now close the circle: teach someone at home to program *YOU* making a sandwich. They give the instructions; you follow them *exactly* — literally, mercilessly, like the machine you now understand. When it goes hilariously wrong, teach them what you'd teach a computer: *be precise, go in order, and when something breaks — read the error, fix one step, run it again.*

That's programming. You speak it now. Class of ______ , dismissed. 🎉
